**National
Deployment**
PROGRAM

PATHWAY TO PARTNERSHIPS

The **National Deployment Program** from PSA Security Network is designed to increase business networking opportunities. With an increasing demand for a logistical infrastructure of security systems integrators, there has never been a better time for integrators to become part of this exclusive PSA Security Network program.

The National Deployment Program relies on a centralized, managed data repository containing security integrator qualifications, certifications and other relevant business information. For the first time, building business partnerships with other integrators is a few clicks away.

If you have a national project, PSA can save you time, money and resources by vetting integrators according to your project standards.

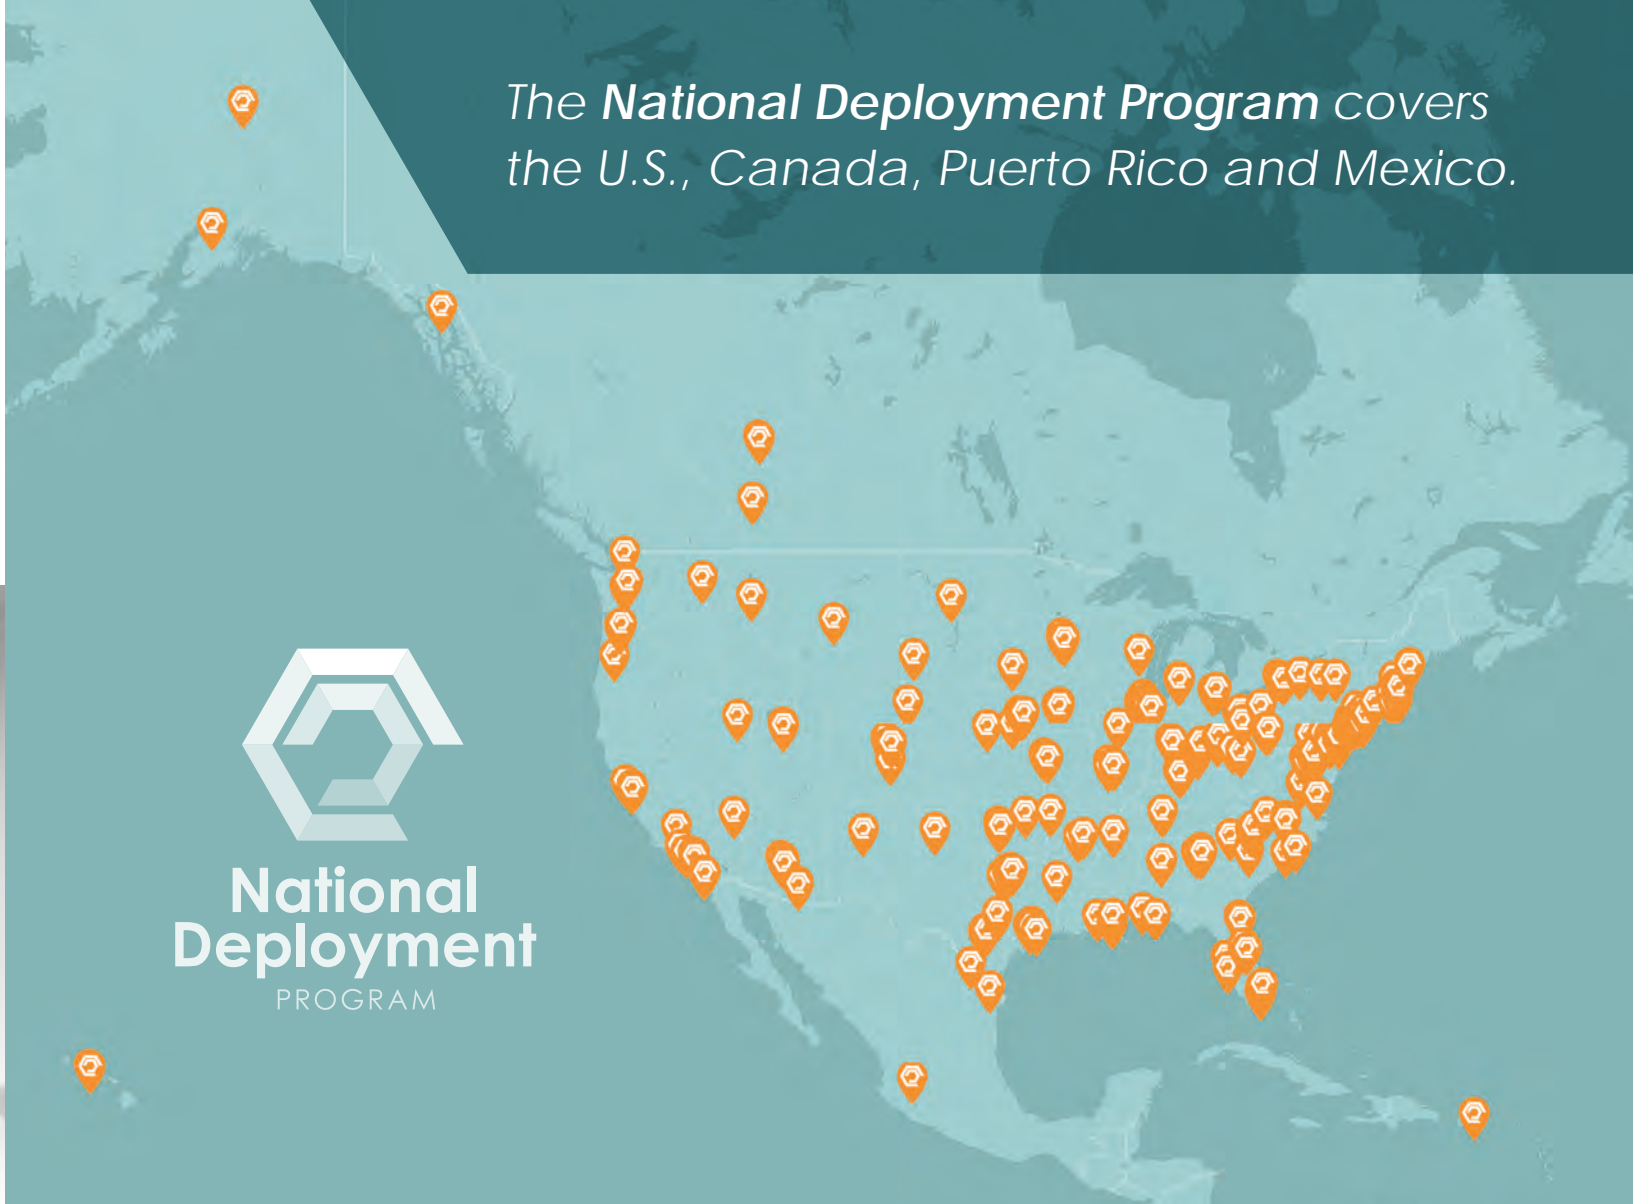

The NDP Advantage

The National Deployment Program allows PSA integrators to boost their competitive advantage in the security market by gaining an expanded installation footprint, additional service capabilities and comprehensive geographic coverage by partnering with other PSA integrators. NDP participants can grow their businesses by acquiring new projects, both nationally and locally, that they may not have had access to previously. With access to real-time information about other PSA integrators, the National Deployment Program allows integrators to build profitable relationships with other security integrators they can trust.

- Quickly locate PSA integrators based on specific project requirements
- Secure new business through new network partnerships
- Associate with nationally recognized clients
- Showcase your local presence and the strength of your network with interactive mapping capabilities
- Develop impressive references and case studies
- Access a digital library of National Deployment best practices that can be customized for your organization (a \$25K value)
- Receive support and leads from PSA vendor partners

The **National Deployment Program** covers the U.S., Canada, Puerto Rico and Mexico.

Our clients are extremely happy because they want to have one solution provider and one company to call to service their systems. Our partnerships enable everyone to achieve that end result.

**Dan Budinoff, President
Security Specialists**

Being in the National Deployment Program is not a guarantee of work, but it will ensure we are not missing a potential partner and that we are selecting the best in every area.

**Paul Thomas, President & COO
Northland Controls**
